Showing vise used with the jaws in a horizontal position. Vise turned halfway on its base. This action does away with the moving of the part held in the vise.

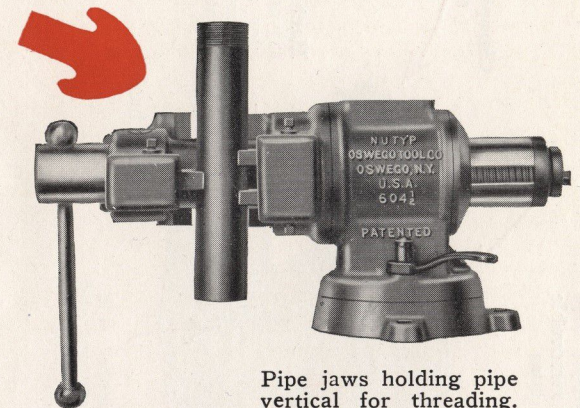

This view shows jaws set vertical, a most convenient position for many operations.

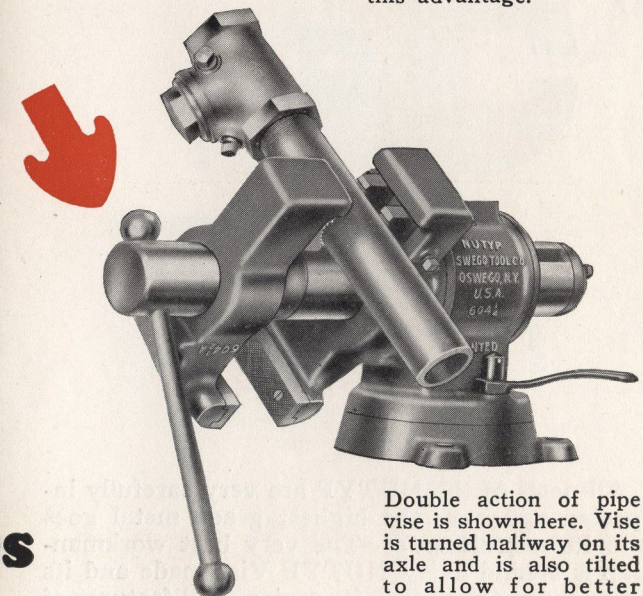

The NUTYP Vise is the only universal adjustment vise with combination of machinist and pipe vise. Double action of base and vise revolving allows its use in any position required. Its big feature—the combination of machinist and pipe vise—makes the NUTYP a most valuable and practical vise to have in the large or small shop, in the garage, on the farm, or in the home. Multiple uses all in one vise. A time saver and an efficient helper. Note the various angles obtainable, in the views here shown. The NUTYP Vise has exceptionally strong steel jaws which will hold pieces of any size or shape in the most convenient position for work.

Pipe jaws in use, holding a pipe horizontal.

Pipe jaws holding pipe vertical for threading. No other vise made has this advantage.

Double action of pipe vise is shown here. Vise is turned halfway on its axle and is also tilted to allow for better handling of part held.

**NUTYP Vise—three sizes**

3½, 4½ and 5 inch Jaws
